OPINION

Review: *Beautiful Minds* by Maddalena Bearzi and Craig Stanford

26 April 2008
From New Scientist Print Edition. [Subscribe](#) and get 4 free issues.
Adrian Barnett

TO SEE the world from someone else's point of view is hard enough, but how much harder when the viewpoint is that of a marine dweller with flippers or an ape whose cognition is based on leaf-centred survival in a rainforest? Hand-signed chimp communications and distinguishing imitation from emulation are two of the topics covered here, the first book to investigate the lives of dolphins and apes in parallel. It explains why both have big brains and, as far as possible, what it must be like to be them. Fascinating.

From issue 2653 of New Scientist magazine, 26 April 2008, page 47
